

La Humique

Humic Acid 12%

(For Foliar and Soil Application)

La Humique is an excellent supplement of Humic Acid, Fulvic Acid & Other related nutrients to plants & soils. It acts as a growth stimulant by chelating soil nutrients and other major & minor nutrients, and also acts as a chelating agent in the absence of chelates.

Soil application of La Humique enhances growth & development of roots & shoots. Foliar application encourages & maintain a better C/N ratio in the plant & maintain better turgidity. It serves very well during drought or any stress condition.

Why La Humique is better ?

- Works excellent for rehabilitation after Mites attack.
- It increases water holding capacity & increases buffering properties of the soil
- It chelates soil nutrients.
- Increases Organic Carbon in soil.
- Improves nutrient uptake especially P, S, and N
- Reduce the need for Nitrogen Fertilization
- It solubilises the minerals and improves the soil structure
- It acts as a store house of N, P, S, Zn
- It acts as a catalyst and increases the resistance capacity of soil & plants
- It improves structure, friability and aeration of soil.

Target Crops :

Agriculture, Horticulture, Plantation, Medicinal Plants etc.

Time of Application :

- Following each soil application of Macronutrients
- Incorporate with foliar nutrient program
- Drenching the young plants

Dosage :

- 250 ml / ha as Foliar Application.
- 400 ml / ha as Foliar Application during drought and rehabilitation.
- 2.5 l / ha for Soil Application
