

Shakti CO₂

Herbal Extraction for CO₂ Absorption

IMPORTANCE

- If humus is the soul of the soil, CO₂ is the soul of plant. Ultra CO₂ supports this soul.
- Photosynthesis is a coin it's one side is of light energy, other side is of CO₂ Without both of them photosynthesis does not takes place.

C is basic building block of the plant Ultra CO₂ supports it

ACTION

- Regulates respiration of the plant
- Enhances strength of stomata cells TP absorb CO₂ effectively

VISUAL OBSERVATIONS

- Leaf area increases significantly
- Leaves are big but rough not succulent
- Thick leaves they are spread open to absorb more sunlight and more CO₂
- Extra N absorption is avoided balanced N absorption
- Induces photosynthesis effectively Significant increase in size of flowers and fruits Significant increase in weight of fruits and produce

NON - VISUAL OBSERVATIONS

- Rate of metabolism of plant is accelerated
- C:N ratio of plant is balanced
- Stimulates uptake of P, K, Si, of the plant
